A holistic approach to the sustainable workplace of the future

Steen Enrico Andersen will be presenting ideas on why the holistic approach is a crucial success factor for the sustainable workplace of the future. In his presentation, Mr. Andersen will be focusing on:

Buildings and the Environment: Sustainable Development

- many new sustainable building are being designed and built with a focus only on their physical and environment impact as criteria to achieve sustainable development. However, these criteria alone cannot guarantee a good sustainable workplace.

Buildings and People: The Integrated Workplace

- many new workplace design projects are being designed and built with a focus on buildings and the people who will be using them, with the integrated workplace as a result

The Sustainable Workplace

- to create a successful sustainable workplace the design process must focus on all these factors: the physical building, the environmental impact and the end user. The integration of sustainable development with the integrated workplace will result in the design of a sustainable workplace.

The influence of building configuration

- the advance from narrow twelve meter wide buildings to the new atrium buildings, the function of the atrium in sustainable development and the key role it plays in achieving the integrated workplace.
